

# ADOPTED REFERENCED CODES, STANDARDS AND GUIDELINES

The formally adopted construction codes adopt by reference certain standards and guidelines in the body of the technical code. These codes adopted by reference are legally required codes the same as if they were formally adopted as a stand alone code. Listed below are some of those codes, standards or guidelines adopted by reference which are commonly used in the plan review and code enforcement process. The full content of all the referenced codes, standards or guidelines is not provided due to copyright laws. Click on the title of the code, standard or guideline and those that may be presented will provide the full text of the document. For those documents not displayed, you must obtain a copy of the document to review the requirements within the code, standard or guideline.
